

## Zones

Zones in Planet eStream allow you to organise multiple signage players into one group. That way it's easier to organise what content will be displayed on them using default content and scheduling. They are useful when you want to display the same content across multiple screens in your estate.

### Step 1: Creating a Zone

To view your Zones or to create new Zones you can navigate to Zones on the top navigation and either open any existing Zones by selecting **Open** or create a **New** zone.

Dashboard Screen Designer Content Loops Screen Loops Message Pools Signage Players **Zones** Schedules Options Data Sources Editor Groups

**What is a Zone?**

Zones are a way to organise multiple Signage Players into a group. This then makes it easier to set the default content to be shown on the Signage Players that are members of the zone, as well as create schedules and send commands.

When creating a new Zone, give it a name and then specify Publishing Policy membership and Privacy.

## Step 2: Adding Players

Once you have created the Zone you are able to add individual signage players as members of your Zone by selecting **Add Signage Players**.

ZONES [Click here to view introductory guide](#)

---

**Default Signage Content**  
Select the default Screen or Screen Loop to be displayed on signage players in this zone when no schedules are active. [Select Default Signage](#)  
To remove the current default click [here](#)

---

**Zone Members**   
Select the signage players to be members of this Zone. Click on the thumbnail to remove a signage player from the list and click 'Save'

---

**Signage Player Commands**

Scheduled Reset  
Set a time for the players within this zone to be reset. Please note this is a one time setting and will be cleared once the command is submitted.

Search for Signage Players and select them to add them to you Zone. You can add as many players as you like.
