

Featured Content Template

It's possible to send content directly from your Planet eStream media library or photo library to your digital signage from the media or photo libraries themselves. To do this you do need to create some featured signage content.

Step 1: Creating the Panel

To start, navigate to the digital signage option within Planet eStream and select **Screen Designer**.

Next select **New** and give you screen design a name. Next use the drop down to change from screen design (which will be displayed by default) to **Featured Content Template**.

After specifying a Publishing Policy and selecting a privacy setting, hit **Create**.

The feature content panel, indicated by three stars, will be automatically added to the screen design when creating a feature content template. You don't have to assign anything to this panel as it will be populated with content from your media or photo libraries when scheduling content from them to this feature content template.

You can modify the background colour of the screen design, the size of the feature content panel and add other panels such as clock, RSS feeds or Message Pools to the screen design.

Step 2: Options

You can use the **Options** menu of your Planet eStream Digital Signage to modify any existing Feature Content Templates.

Click on the pencil icon to open an existing template and make changes.

The screenshot displays the 'DIGITAL SIGNAGE OPTIONS' interface. The top navigation bar includes icons for Dashboard, Screen Designer, Content Loops, Screen Loops, Message Pools, Signage Players, Zones, Schedules, **Options** (highlighted), Data Sources, and Editor Groups. The main content area is divided into two sections: 'Signage Options' and 'Feature Content Templates'. The 'Signage Options' section includes 'Global Override' (with 'Select Signage Screen' and 'Activate Override' buttons), 'Signage Player Commands' (with 'Reset' and 'Reboot' buttons), and 'Scheduled Reset' (with a time input field set to '23:00'). The 'Feature Content Templates' section includes a description and three template cards: 'Full Screen Content', 'Testtemplate', and 'Feature1'. The 'Full Screen Content' card has a pencil icon highlighted with a red box. The right sidebar shows 'Recent Items' with a grid of content items, including 'Inspire Library Loop', 'Blog test 1 SD full screen', 'Blog Test1', 'BenLoop2', 'benFsvi2', 'benFsvi1', 'TestEdgeForThumbs', and 'benTest2'.

Step 3: Assigning content

Content is assigned to a featured content template from the media or photo libraries by select the **Send to Signage** option.

To do this, search for your content, select **Send to Signage** and select the template that you want to display this content on.

Next you can pick a player or zone to display the content on and select a schedule option. When you are finished click **Confirm**.
