

Subtitle Editor

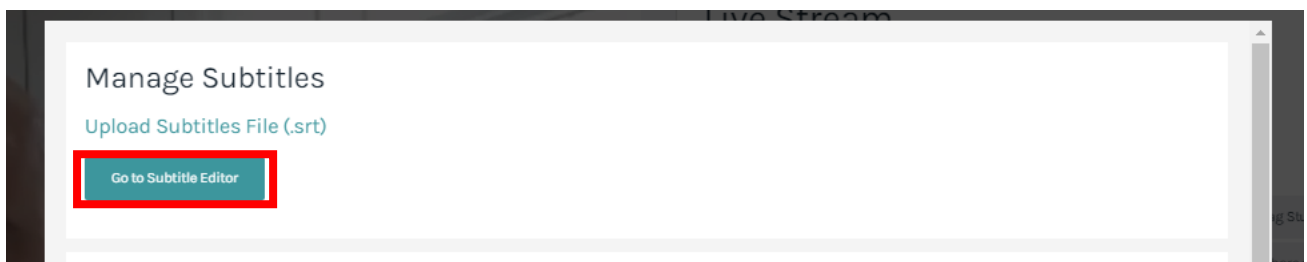

Planet eStream includes a Subtitle Editing tool to enable users to modify any subtitles that have been added to their content.

Step One – Accessing the Subtitle Editor

Navigate to a video and select **Manage Subtitles**.

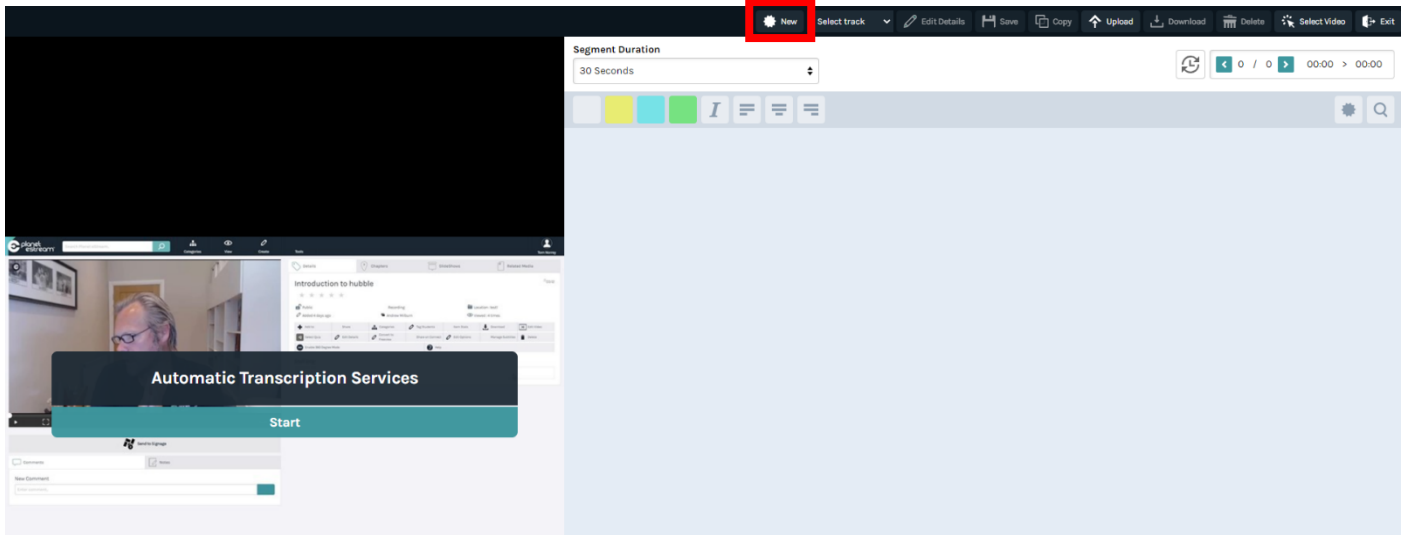

Select **Go to Subtitle Editor**

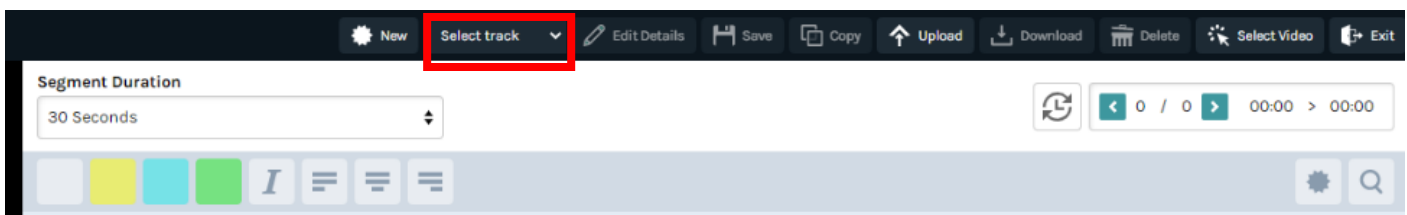

Step Two – Editing Subtitles

Once the Subtitle Editor has loaded select **New** to create a new subtitle track from scratch.

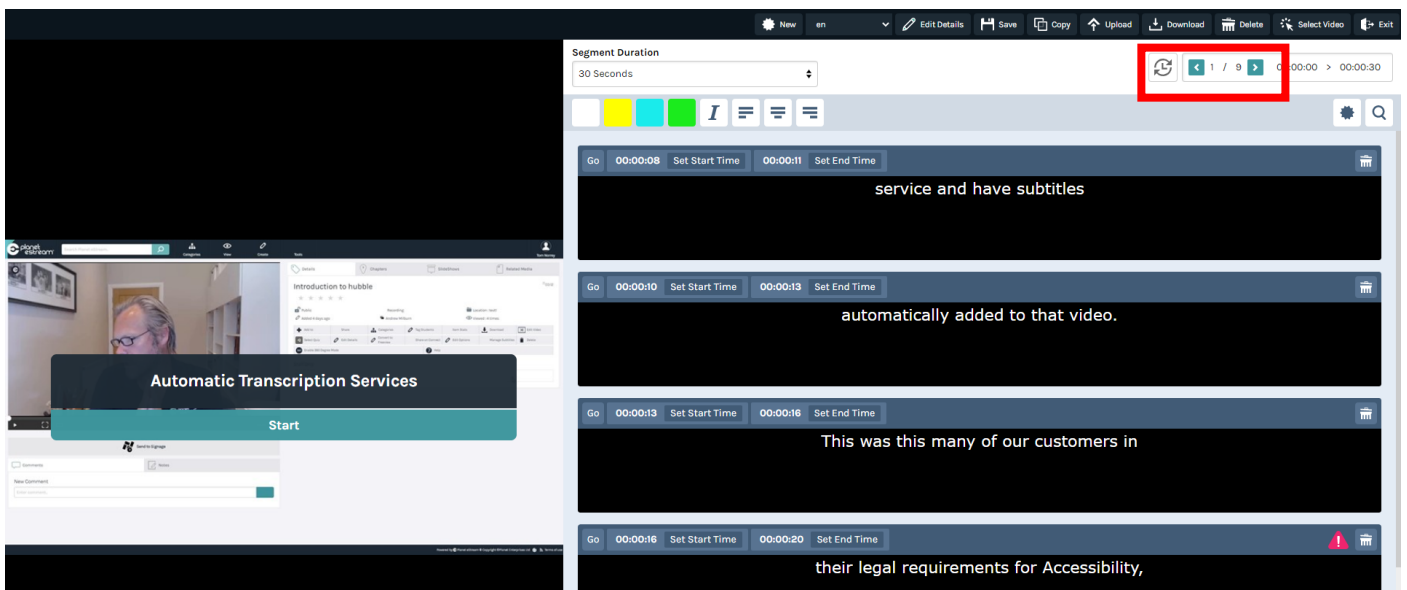

More commonly, users will be editing an existing set of subtitles, so select the relevant track from the drop-down.

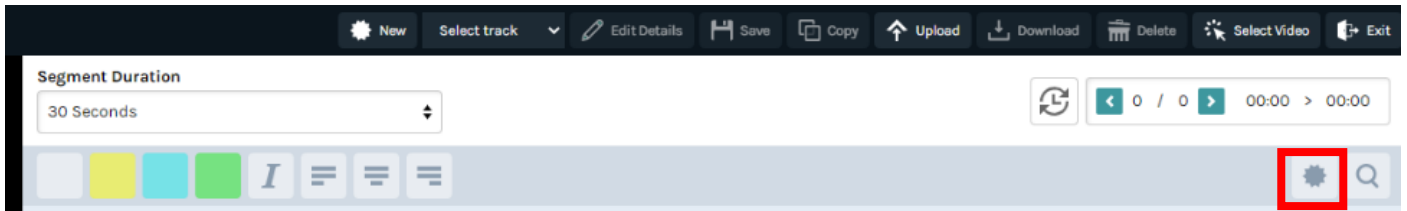

This will launch the current subtitle track and each line of subtitles will be shown on the right-hand side. Each line corresponds to a time and you can modify the wording by simply typing into the box.

Users can navigate through the different pages of subtitles by using the arrows.

To add a new line of subtitles, users can select the new icon.

This will launch a new window and where a new section can be typed. The start and end time can simply be entered using a keyboard or the **Set** option can be used to make this new section correspond to specific timings within the video.

Once you have finished creating or modifying a subtitle track simply save you changes and exit the editor. A video can have multiple subtitle tracks.
